COVER LETTER

TO :
JHON SMITH
Assisten Manager
Victoria, Melbourne

FROM :
Mohamed Helmy
Full Stack Developer

Date
January, 20-2025

Dear Sir or Madam,

I am excited to apply for the Front-End Web Developer position on your team. I am a passionate developer dedicated to creating attractive website design and a career-changer who has experienced first-hand the transformational power of business development. I would love to work for OTG and contribute to the mission of transform the airport experience by creating an online experience that can inspire a wider audience.

During my 2 years as a freelance front end developer, I assisted a website developer with designing our event pages to better reflect the design of the exhibition experience for audiences. I was able to recommend website improvements by using visitor feedback, which increased our average user rating from 3 to 4.5. This experience kindled my passion for website design and taught me to always keep the user experience and interaction in mind.

To gain more coding experience, I completed Udacity's Front-End Web Development Nanodegree program, which has taught me HTML, CSS, Javascript and React.js to develop my own web applications. More recently, I completed a freelance project where I improved an art gallery's inefficient online auction web application's JavaScript, CSS and assets delivery. I ensured that it was running at 60fps and achieved a Page Speed score of at least 90.

I hope to bring to OTG my fresh perspective as a developer and my adaptability and diligence as a career-changer. I look forward to speaking with you to further discuss my qualifications.

Mohamed Helmy

Sincerely
Mohamed Helmy
